

MYKAL SULLIVAN

INFRASTRUCTURE ENGINEER | LINUX & WINDOWS SYSTEMS | NETWORKING &
SECURE SERVICE INTEGRATION

Infrastructure engineer specializing in Linux-based service platforms, network architecture, and secure connectivity. Experienced in integrating modern systems with legacy environments, designing segmented networks, and building reliable service infrastructure, with a foundation in systems programming and low-level Linux internals.

CONTACT

-  (501) 449-7228
-  mykalsullivan@duck.com
-  Judsonia, AR (seeking to relocate)

CERTIFICATIONS

- CompTIA A+
- CompTIA Linux+
- CompTIA Network+
- CompTIA Security+
- Microsoft Azure Fundamentals

Expected 2026:

- RHCSA
- LPIC-1
- CompTIA PenTest+

SKILLS

- **Operating Systems & Virtualization:** Linux (Debian/Ubuntu), Windows Server/AD, Windows 10/11, KVM/QEMU, Docker
- **Networking & Security:** TCP/IP, VLANs, VPN (WireGuard), firewalls (pfSense), DHCP/DNS, VoIP (Asterisk)
- **Systems & Operations:** Domain controllers (Windows & Linux), backups & recovery, monitoring/logging, patching/upgrades, device deployment, system reliability
- **Scripting & Tools:** Bash, PowerShell, Python, C++

EDUCATION

University of Arkansas in Little Rock
B.S. Computer Science (Game Dev.)
B.S. Mathematics

Arkansas State University - Beebe
A.S. Computer Information Systems
A.S. Liberal Arts and Sciences
A.G.S. General Studies

INFRASTRUCTURE & SYSTEMS PROJECTS

Network Architecture & Secure Connectivity

- Designed segmented internal networks with isolated subnets and managed routing via virtualized pfSense firewall/gateway.
- Placed hypervisor behind firewall to enforce consistent security and traffic policies.
- Passed physical NICs to pfSense for seamless integration with managed switches and router hardware.
- Implemented secure site-to-site VPNs to mitigate CGNAT port-forwarding restrictions and PPP access for legacy and constrained clients.
- Emphasized trust boundaries, minimized lateral movement, and maintained clear, maintainable configurations.
- Designed and operated a dedicated backup server with automated daily backups for critical services, ensuring rapid recovery and high-availability.

Service & Platform Hosting

- Built and operated headless Debian Linux platforms hosting several internal services.
- Deployed and managed Asterisk VoIP, web services, and internal tooling with modular, resilient design.
- Isolated services within network zones defined by firewall policies to enhance security and reliability.
- Prioritized operational stability, maintainability, and clear configuration management.

Virtualization, Hardware, & Legacy Integration

- Integrated modern Linux services with legacy clients and physical hardware interfaces.
- Implemented serial device passthrough to support physical modem connectivity.
- Designed interfaces enabling legacy clients to interact with modern services without direct coupling.
- Facilitated gradual modernization while maintaining system stability.
- Prioritized compatibility, reliability, and controlled.

WORK EXPERIENCE

Computer Support Technician

Arkansas State University - Beebe
Part-Time: Jan. '24 - Oct. '24; Full-Time: Oct. '24 - Oct. '25

- Supported 3,700+ users across four campuses, resolving technical issues with minimal escalation.
- Migrated all computers from Windows 10 to 11 using automated scripts; updated HP printers network-wide to mitigate a zero-day driver exploit.
- Administered account access, MFA, and Active Directory/Azure AD; coordinated with Banner support and external teams.
- Maintained network connectivity, hardware, and system stability.

IT Field Technician

ARcare
Oct. '25 - Dec. '25

- Supported 1,400+ employees across 90 sites, coordinating with remote and infrastructure teams.
- Replaced all fax ATAs in 4 days, minimizing downtime for critical communications.
- Installed and maintained PCs, printers, VoIP phones, network cabling, and security systems.
- Troubleshot network and hardware issues to maintain operational continuity.
